

## Smart Homes

Smart homes are not just temporary houses but a new technology designed to provide easily transportable high quality living accommodation for any purpose, anywhere. These elegant buildings are supplied fully equipped and ready to assemble. Options include various internal layouts, exterior decking and a covered veranda overhang. Custom layouts can be catered to if required.

This model of SMART folding building is supplied with internal partitions offering a completely self contained three bed roomed home. In total there is 82 square meters of accommodation thoughtfully divided into one master bedroom with built in closet, two further bedrooms, a bathroom with toilet, wash basin and a shower, a spacious open plan living area with outside access on two sides and a kitchen dining area. Accessed from outside is a self contained plant room housing heating, air conditioning and hot water plant. The building is fully insulated and finished with high quality composite panels.

The SMART house is based on a 40' high cube Smart into which are packed all of the components required to assemble and operate the building. Transportable by air sea or truck the SMART house can be easily transported using existing sea Smart shipping logistics and handling equipment.

The folding building concept offers countless opportunities for temporary or permanent accommodation needs in any location or environment. Based on a standard shipping Smart footprint the folding building is supplied in a flat pack format and literally 'folds' open to form a fully operational building. .
